

Retrocession Hub

Transforming Treaty Data Capture & Submission for the Reinsurance Industry

Understanding Retrocession

In reinsurance, retrocession is the process by which a reinsurer transfers part of the risks it has assumed to another reinsurer. Much like primary insurers cede risk to reinsurers, reinsurers themselves often need to diversify exposure and free up capital — this is where retrocession comes in.

Retrocession matters more than ever in today's risk environment:

- **Risk Transfer at Scale** – Global insurers face increasingly complex exposures, from cyber threats to natural catastrophes. Retrocession spreads those risks further.
- **Capital Efficiency** – By sharing liabilities, reinsurers maintain solvency and optimize their use of capital.
- **Climate Change Pressures** – Increasing frequency and severity of losses demand more robust, data-driven retrocession arrangements.

Introducing Retrocession Hub

Retrocession Hub is a next-generation digital platform built specifically for treaty data capture, analysis, and submission. It eliminates the inefficiencies of manual spreadsheets and fragmented workflows, offering a unified, intuitive, and secure environment for reinsurers, brokers, and actuarial teams.

By aligning with real-world reinsurance processes, Retrocession Hub streamlines the entire lifecycle of treaty submissions — from client details to advanced analytics — ensuring accuracy, transparency, and speed.

Key Features & Benefits

Branding & Navigation: Clear, professional interface with an intuitive 'Client Details' entry point. Consistent navigation across Property and Casualty treaties.

Client Data Capture: Smart dropdowns with defaults, validation, inline error messages, and autosave to reduce data errors and speed onboarding.

Submission Meta & Propagation: Centralized treaty information automatically synced across steps, ensuring consistency everywhere.

Property & Casualty Workflows: Workflows aligned to industry practices, covering Client Details, EPI Summary, Treaty Statistics, Risk Profiles, and more.

Data Persistence & Autosave: Supabase-backed reliability, bulk ingestion via Paste from Excel, and standardized Excel exports.

Security & Routing: Supabase authentication, gated access, and deep-linking for collaboration.

UI/UX Experience: Responsive Tailwind design, robust Excel parser, and normalized labels for clarity.

Key Analytical Modules: EPI Summary for treaty type auto-propagation, Large Loss Triangulation with dynamic columns, and Cresta Zone Control for exposure data.

Developer Experience: Modern stack with Vite and React, extensibility, and strong test coverage for reliability.

Why Retrocession Hub?

Retrocession Hub is not just a digital tool — it is a strategic asset for reinsurance organizations. It delivers:

- Efficiency – Automate repetitive tasks, minimize re-keying of data.
- Accuracy – Ensure consistent treaty information across every step.
- Confidence – Reliable autosave, validation, and security features safeguard critical data.
- Insight – Modules like Cresta Zone Control and Loss Triangulation provide actionable analytics for decision-makers.

Call to Action

Retrocession Hub transforms treaty data capture from a burdensome necessity into a competitive advantage. Whether you are a reinsurer seeking operational efficiency, a broker facilitating submissions, or an actuarial team analyzing risks, this system equips you with the tools to work smarter, faster, and with greater confidence.

Discover the future of retrocession today. Trial Retrocession Hub and unlock a new standard of efficiency in reinsurance.
